

Enable 2025: The Future of Localization for PowerBuilder Applications

Innovations and Upcoming Features for Streamlined Localization

Gian Luca De Bonis, Enable Development
February 6, 2025

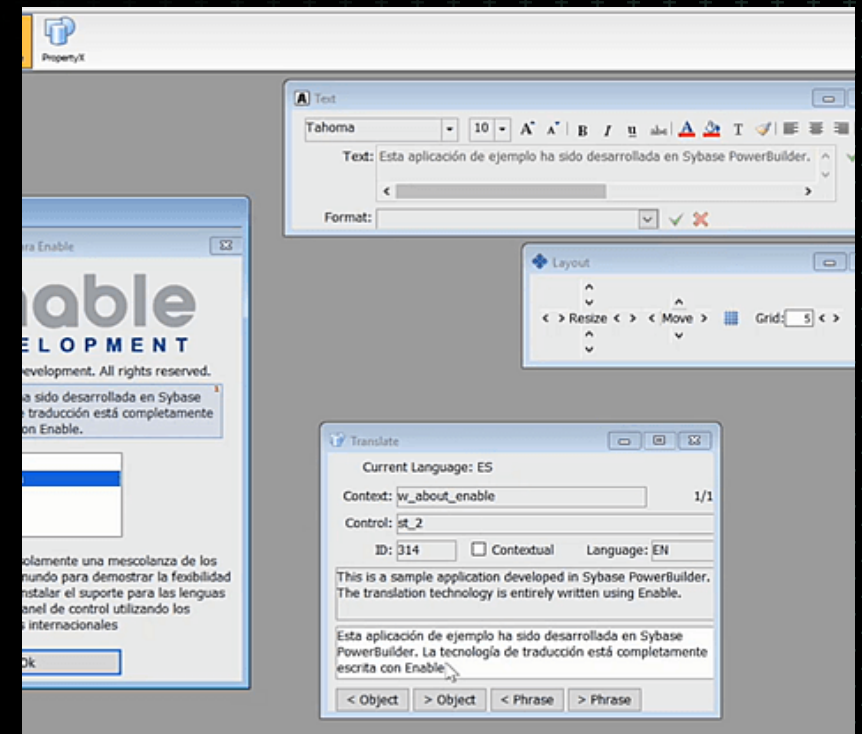

What is Enable?

Created in 2004, Enable is the de-facto standard for localizing PowerBuilder applications.

Key Features:

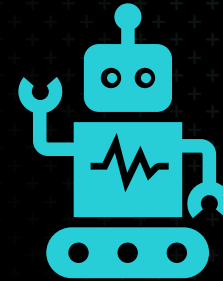

- Fast C++ engine for translations in runtime.
- **Simple** integration, one **single** source code
- Compact multilingual DB, no installation or royalties.
- Source code parser for extracting application strings.
- Support for **RTL** languages
- Runtime tool for customization and translation, also for end users.
- Command-line interface for CI/CD pipelines.
- Translation memory support.
- Compatible with PB9-2022R3, PowerServer, and PowerClient.

What's Next for Enable?

Ongoing development for
PowerBuilder 2025
compatibility

Upcoming integration with
Enable.AI for automated
translations

Enable.AI Capabilities

Enable.AI is the Enable translation engine, exposed as a Web API

Translate phrases into specific languages

Batch translate all phrases without translations

Command-line support for automation

Handle PowerBuilder's special string structures
(e.g., tilde characters, parameters)

Enable.AI Benefits

01

Quick translation
of new strings

02

Seamless addition
of new languages

03

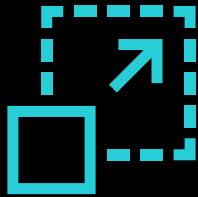

Easy CI/CD process
integration
(capture, import,
translate phrases)

Why Enable 2025 Will Lead the Way

Speed

Faster localization with planned automation.

Scalability

Designed to handle growing multilingual needs.

Reliability

Built on two decades of proven solutions.

Future-Proof

Aligning with PB2025 and AI-driven trends.
